Note: Maximum centers for ceiling cross runners, main runners, hangers, and brackets are based on limiting deflection criteria of L/360, allowing for loading of plasterboard and insulation as shown in the performance tables. If an additional load will be applied to the ceiling, contact the Gypsemna Technical team. Performance values are for imperforate, jointed systems using only Gypsemna components and installed to the Gypsemna specification given. Any alterations may well impair the quoted performance criteria.
